Water pump starts with faucets closed?

Observation sheet · RV4Campers · Date: _____

> **Observe; do not dismantle pressurized plumbing.** If water is escaping, turn off the pump and city-water supply. Keep clear of wet electrical equipment. Leave the pump off unattended while the fault is unresolved.

Equipment

RV year/model:

Pump model:

Source and mode

Tank / City / Both when symptom started:

Panel mode and photo reference:

Pump behavior

Reaches shutoff? Yes / No Quiet interval:

Restart duration: Steady flow or sputtering?

Water clues

New water entering toilet / Damp joint / External drip / None seen:

Unexpected fresh-tank filling on city water?

Recent changes

Storage / Freeze / Filter / Plumbing work / Valve setting:

Last known normal operation:

One check and its result

Normal control checked:

What changed, and what still happens:

Attach: pump label, panel settings and moisture photos. Record timing as a clue, not a leak-size calculation. A dry floor does not diagnose a failed check valve.

Use your RV and pump manuals. This sheet records observations; it is not a repair procedure.
